

OAKPARKSECURITY

PHYSICAL & DATA SECURITY AUDIT

How resilient is your business?

Secure your future.

A 360° Approach

Oakpark Security and Rio have established a strategic partnership designed to help small and medium-sized businesses (SMEs) adopt a 360° approach to organisational resilience, in which both physical assets and electronic data are considered.

SMEs are the most vulnerable

SMEs do not often possess the organisational structures, specialist technical knowledge or the dedicated resources that larger organisations can devote to building resilience - leaving you vulnerable to unplanned disruption.

Protect your business from disruption.

Strengthen Organisational Resilience

Make sure you can anticipate, respond and adapt to both incremental change and sudden disruptions.

Survive and Prosper

The commercial world of today sees businesses operate in an environment of greater volatility and uncertainty than ever before. Businesses are finding the financial costs of disruption to be increasingly severe - and in some cases, terminal.

As such, it is no longer feasible to plan for the expected risks; businesses must devote the appropriate time and resources to ensuring they can absorb and respond to the unexpected.

Data Resilience

IT Security

Rio can establish your risk exposure and look at: countermeasures, penetration testing, patching, firmware, permissions, procedures and more - protecting you from disruption or potentially devastating loss or publication of data.

Data Integrity

Our engineers can assess backup solution resilience, Recovery Point Objective and Recovery Point Time (backup frequency and data availability) and environmental risks to your IT resilience to ensure you never lose data.

Business Continuity

If a disaster were to occur, you need a Business Continuity Plan to return to typical business operation as soon as possible. This allows you to prevent or minimise loss of data and loss of revenue. Rio can ensure you understand the preparedness of your business and how to address any weaknesses.

Support Framework

The support of your systems and applications is crucial for the operation of your business. We can audit what SLAs exist between your business and 3rd parties and ensure they are within an acceptable level.

Physical Resilience

Security Personnel

Oakpark Security can provide uniformed security officers who are able to integrate into your business operations. We support our security officers with an industry-leading training initiative and the latest mobile technology.

Keyholding & Mobile Patrols

Our Mobile Solutions team provides a cost-effective contribution to resilience during non-working hours by offering a robust and visible deterrent to potential intruders and a rapid response service in the event of an incident.

Monitoring & Response

Our Remote Monitoring Centre can provide a 24/7 support facility for your core business operations, including telephony, CCTV and Building Management Systems. Any detected incident can be managed immediately through the tasking of a mobile response vehicle.

Resilience Consultancy

Oakpark Security's consultancy team can provide a physical security audit of your business using our bespoke Security Risk Survey document. Our consultants will produce a written report of your business vulnerabilities and work in partnership with you to implement a clear business resilience strategy.

ORGANISATIONAL RESILIENCE

About Us

www.rioit.co.uk
